Subject: list of revisions to make from RtC

- 8.13 Define friable on first use
- 8.14 Asbestos being vital or the chloro-alkali industry should be attributed to industry and not USGS.
- 8.15 We already revised text related to Richter 2009 this morning and I've noted this in RtC. Will not any additional text on litigation
- 8.19 Leonid responded that we used chrysotile asbestos throughout, as suggested by the comment. But did we change all uses of chrysotile to chrysotile asbestos?
- 8.20 Append the word "asbestos" to all references to amphiboles.
- 8.25 Redefine most susceptible – "Workers exposed to asbestos in workplace air, especially if they work directly with asbestos, are most susceptible to the health effects associated with asbestos due to higher exposures."
- 8.30 Table 2-4, should 11 or .019 be listed as max result? I emailed Jay.
